

PRODUCT REQUIREMENTS DOCUMENT (PRD)

FOR FULL PROJECT

1. PROJECT TITLE

HelpDesk Lite — Internal Support Ticketing Workspace

2. WHAT? (OBJECTIVE)

Build a lightweight internal helpdesk system that helps support requests move more clearly from submission to handling and resolution.

3. WHY? (BUSINESS VALUE)

Employees currently submit support requests through email, chat, and informal follow-ups.

This creates unclear ownership, duplicated requests, inconsistent follow-up, and limited visibility into open or delayed issues.

HelpDesk Lite aims to centralize support requests and make ownership, progress, and resolution clearer for employees, support staff, and managers.

4. WHO ARE THE USERS?

- Employees
- Support / Operations Staff
- Managers

5. PROBLEM

Employees currently submit support requests through multiple channels such as email, chat, and informal follow-up. This leads to delays, duplicated requests, inconsistent updates, unclear ownership, repeated clarification, and weak manager visibility.

6. SOLUTION

A lightweight internal helpdesk system that provides a more structured way for requests to move from submission to handling and resolution.

7. V1 SCOPE

The V1 scope focuses on improving:

- Request intake clarity
- Request ownership
- Progress visibility
- Consistency of handling
- Manager visibility

- Request organization
- Reduction of repetitive support effort

8. FUNCTIONAL REQUIREMENTS

- Support structured request intake.
- Make request ownership clear.
- Provide visibility into request progress.
- Support consistent request handling.
- Provide managers with visibility into workload/open issues.
- Organize support requests in a central workflow.

9. NON-FUNCTIONAL REQUIREMENTS

- Easy for internal teams to adopt.
- Lightweight and practical.
- Avoid unnecessary complexity.
- The workflow should improve clarity without creating overhead

10. DEPENDENCIES

- Definition of required request information.
- Definition of ownership rules.
- Definition of request states/workflow.
- Definition of manager visibility requirements.
- V1 scope decisions.
- Decision on whether self-service/help content belongs in V1.

11. SUCCESS METRICS

- Clearer request intake.
- Clear ownership of requests.
- Better visibility into open/delayed issues.
- More consistent request handling.
- Better manager visibility.
- Reduced repetitive clarification/support effort.

12. OUT OF SCOPE (v1)

- Huge enterprise-level helpdesk capabilities
- Unnecessary complexity or over-engineered workflows
- Features beyond the lightweight and practical V1 goal

13. OPEN QUESTIONS

1. What information must be collected when a request is submitted?
2. How should ownership work?
3. What request states should the workflow use?
4. What do managers need to see?
5. What should be included in V1 versus later versions?
6. Should self-service elements such as help content be part of the first release?

14. MAJOR RISKS

- Unclear ownership rules may cause delays or confusion in handling requests.
- Unclear request states may lead to inconsistent workflow handling.
- Unclear V1 boundaries may cause scope expansion and unnecessary complexity.
- Insufficient clarity about manager visibility needs may lead to rework.
- Too much complexity in the workflow may reduce internal team adoption.
